

Walmart Sales Dashboard – Executive Summary

Project Goal

The purpose of this project is to examine Walmart's weekly sales data to identify sales patterns, evaluate store performance, and determine whether factors such as holidays, temperature, fuel prices, Consumer Price Index (CPI), and unemployment influence sales.

Major Findings

- The dataset includes sales information from 45 Walmart stores, with noticeable differences in performance among stores.
- Some stores consistently achieved higher sales, indicating strategies that could be adopted by lower-performing locations.
- Sales levels changed significantly during holiday periods, showing the importance of seasonal demand.
- Weekly sales displayed recurring patterns throughout the year, suggesting seasonal fluctuations in customer purchasing behavior.
- Temperature, fuel prices, CPI, and unemployment showed only a limited relationship with weekly sales performance.

Recommendations

- Plan marketing campaigns around peak sales periods to maximize revenue.
- Study the practices of high-performing stores and implement suitable strategies across other locations.
- Ensure adequate inventory before major holidays and high-demand seasons.
- Track economic indicators while placing greater emphasis on customer buying patterns and seasonal trends.

Conclusion

The Walmart Sales Dashboard helps businesses understand sales trends, compare store performance, and evaluate the impact of external factors. The insights generated from the dashboard support better decision-making and improve strategic planning.
